

## RDTronLottery FAQs

### What is [RDTronLottery](#)?

- It is an smart contract deployed in the Tron Blockchain, created to raffle funds obtained from the crypto community by selling tickets to enter the raffle.

### How does the Raffle work?

- The Smart Contract is coded to randomly select 2 winners and send to the address of the wallet with which you purchased your tickets the prize obtained and prepare the scenario for the next raffle.

### How much does a Ticket cost and how many can I buy?

- The cost of a ticket is 10 trx and the participant can buy the number of tickets they want.

### How many Tickets can I purchase per transaction?

- The contract allows you to purchase a minimum of 1 ticket and a maximum of 50 for each transaction. If the participant tries to buy more than 50 in the same transaction, it will be revoked and the system will return a message with the reason why it was **revoked**.

### ¿How many raffles is a ticket valid for?

- Tickets are valid for a raffle only, as the contract is coded so that after it has chosen the 2 winners delete the list of participants and leave the next ticket sale ready.

### What is the Amount earned by each winning participant?

- [RDTronLottery](#) will always have 2 winners with a fixed winning percentage equivalent to 85% (50% first winner and 35% second winner) of the total accumulated at the time of the raffle, that is, if at the time of the raffle the contract has in depth 1,000,000 trx, the prize would be distributed as follows:

**First winner:**  $1,000,000 \times 50\% = 500,000$  trx (Automatically sent to his wallet).

**Second winner:**  $1,000,000 \times 35\% = 350,000$  trx (Automatically sent to his wallet).

### **What about the remaining 15%?**

- [RDTronLottery](#) smart contract retains 10% of the total in each raffle, with this initiative we seek to increase the fund to be governed each time the draw is executed, attract more participant to the community that interacts with the contract and reduce the time for the raffle to run 100% automatically. Our goal is that it is at least 2 times a week. The remaining 5% will be earmarked for the payment of maintenance and support of the platform, incentive raffles to members and payments to the team behind the project.

### **How will they have my wallet if I'm a winner?**

- Immediately your wallet interacts with the contract and successfully makes the purchase of tickets, your address is added to the list of participants as many times as tickets you have purchased and from that list will be chosen the 2 winners.

### **Why is the contract unverified?**

- The contract has not been verified to prevent its code from being visible and ill-intentioned people from copying, modifying, backdoors, and scamming people.

### **What do I need to participate?**

- To participate you will need to have a tron wallet, either [on TronLink](#) or [Klever Wallet](#) with sufficient balance, both to pay for the tickets you buy and to pay the fees for the transaction.

### **What if the price of trx reaches 1 dollar?**

- When this scenario happens, we will adjust the ticket price and the amount available for sale, so that be possible for anyone to participate in the raffle.
